

Territorial buildings emissions

Direct combustion in buildings (CRF 1.A.4); dashed and dotted lines: official 2040 projections

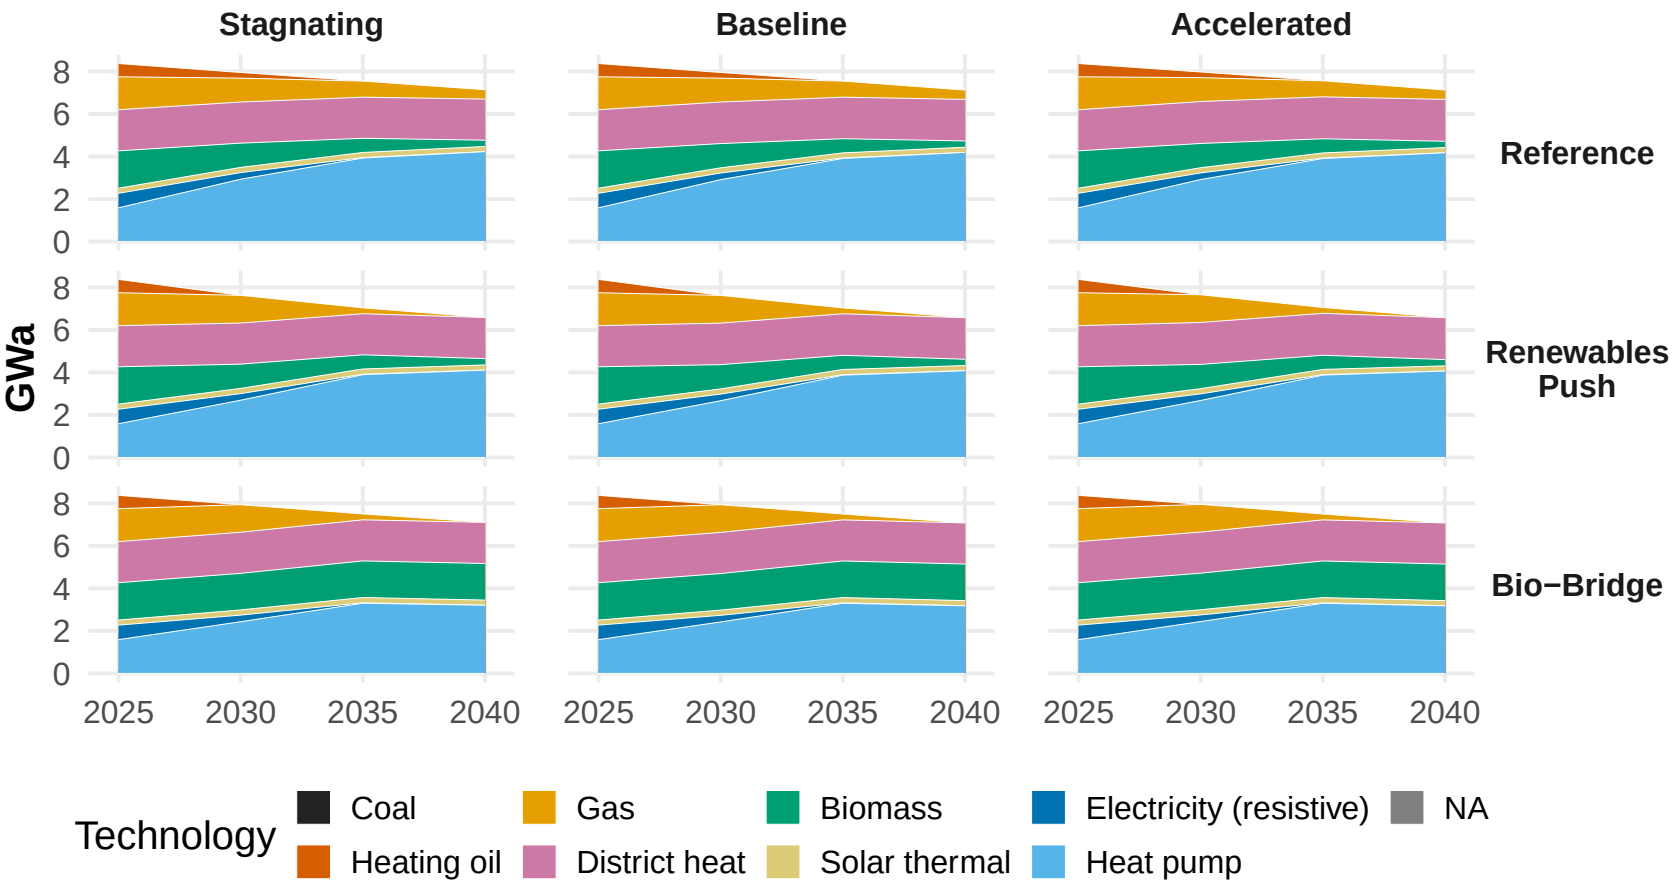

Consumption–basis buildings emissions

Direct emissions plus the attributed emissions of purchased electricity and district heat (fixed factors)

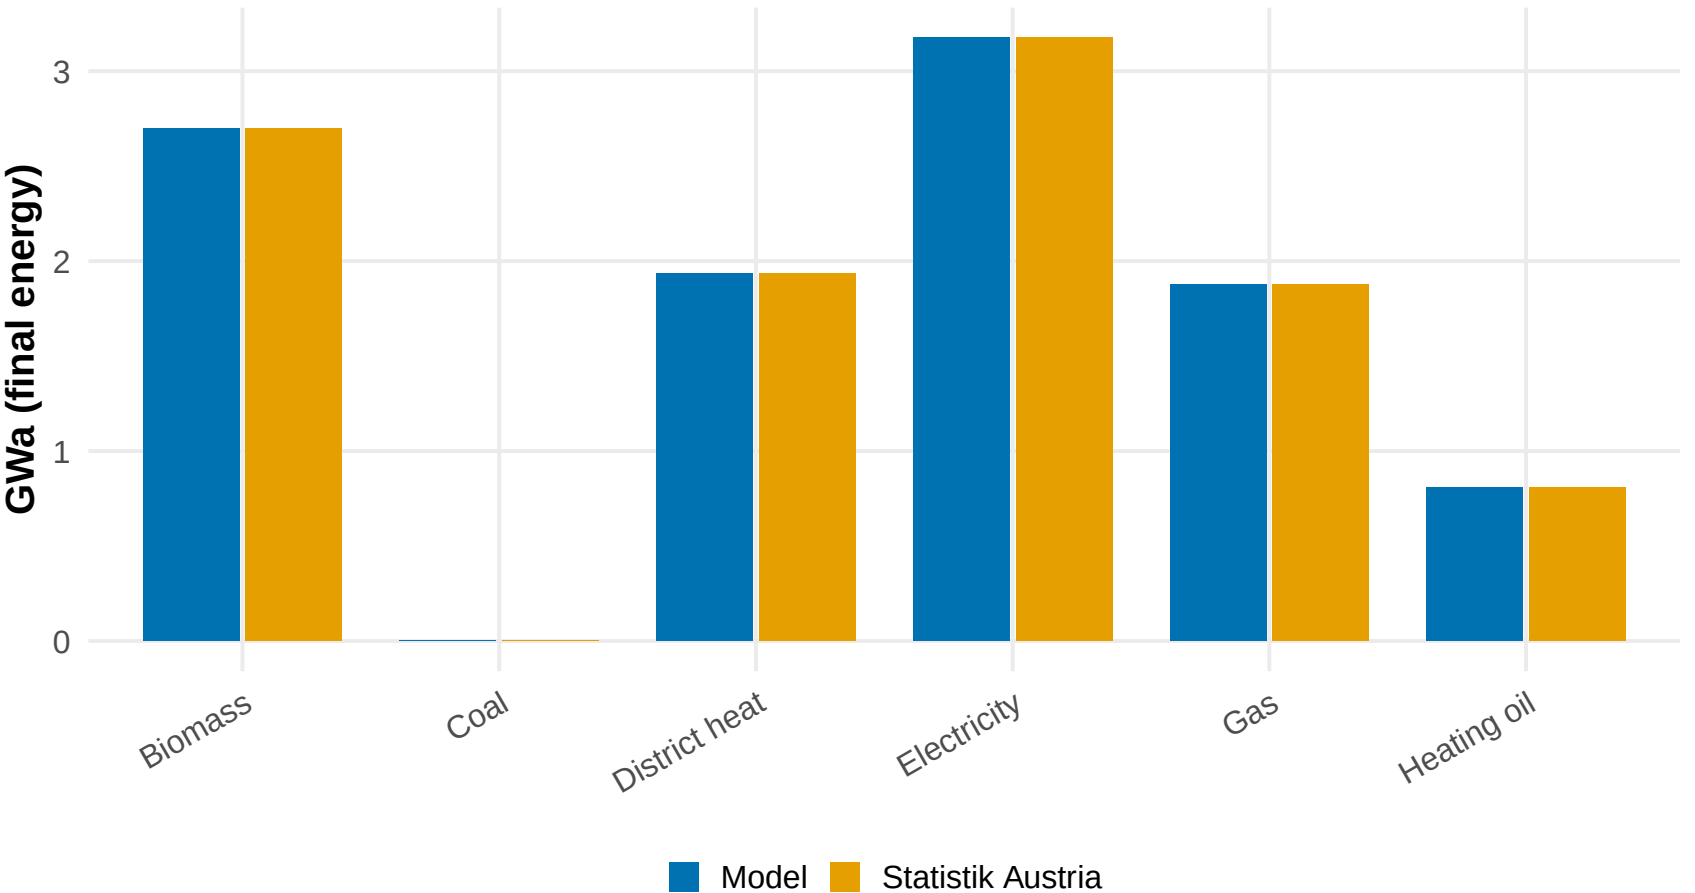

Buildings heating–system activity by technology

Rows: pathway, columns: adoption level

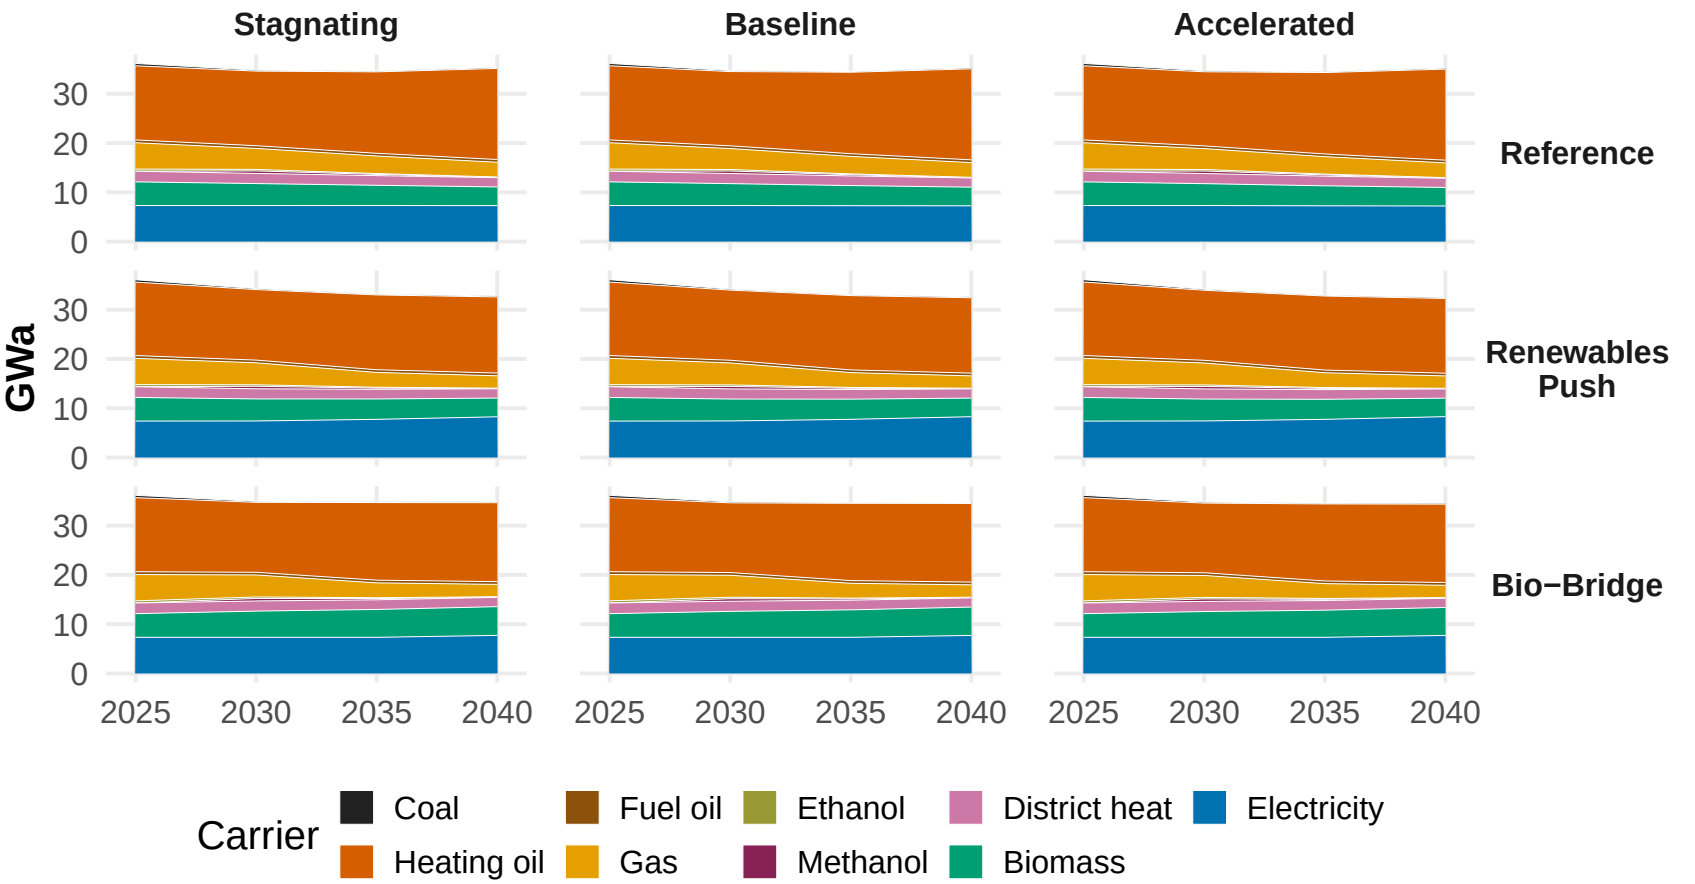

Base-year (2025) pin integrity (imposed calibration)

Buildings final energy by fuel: the anchor pin reproduces Statistik Austria by construction

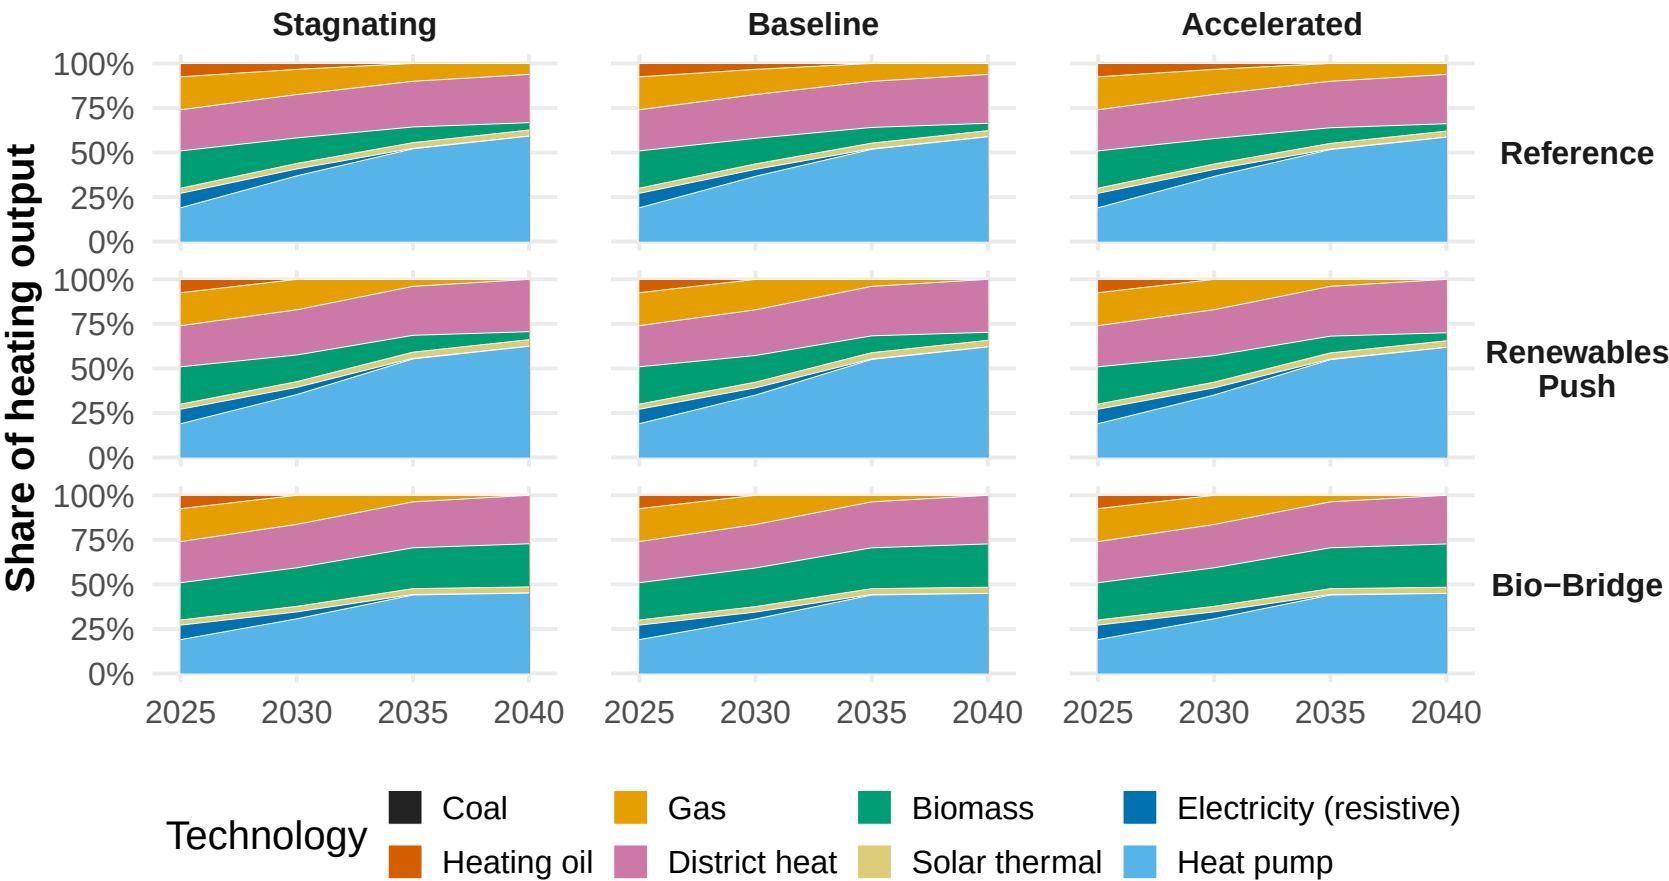

System final energy by carrier

Rows: pathway, columns: adoption level

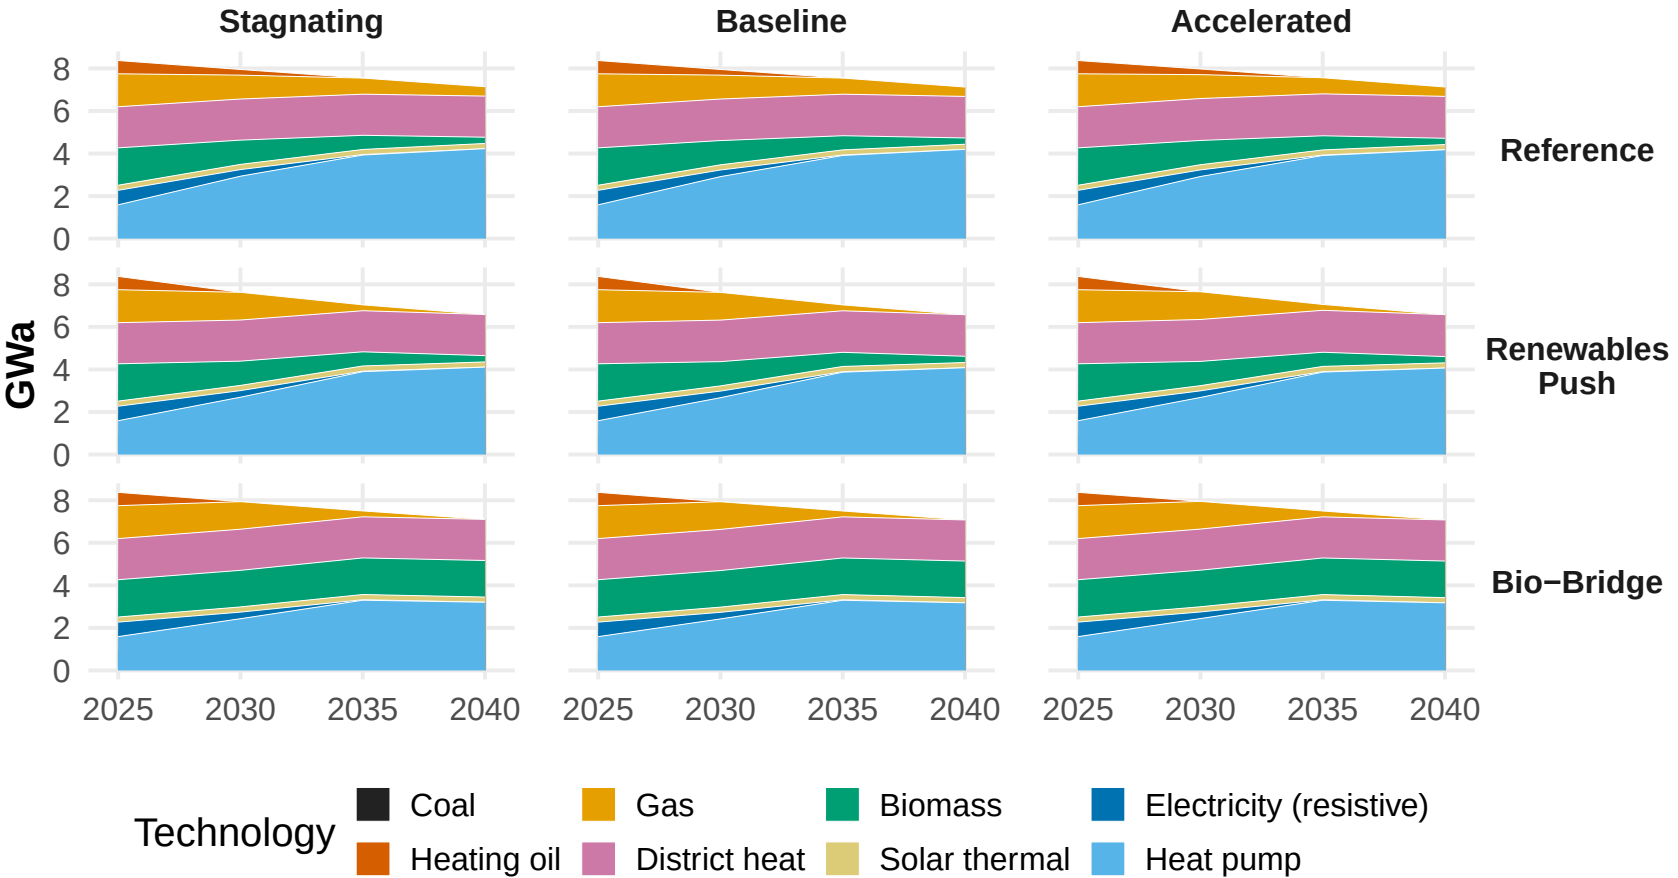

Heating-system transition

Share of useful-energy output by technology, incl. solar thermal; rows: pathway, columns: adoption level

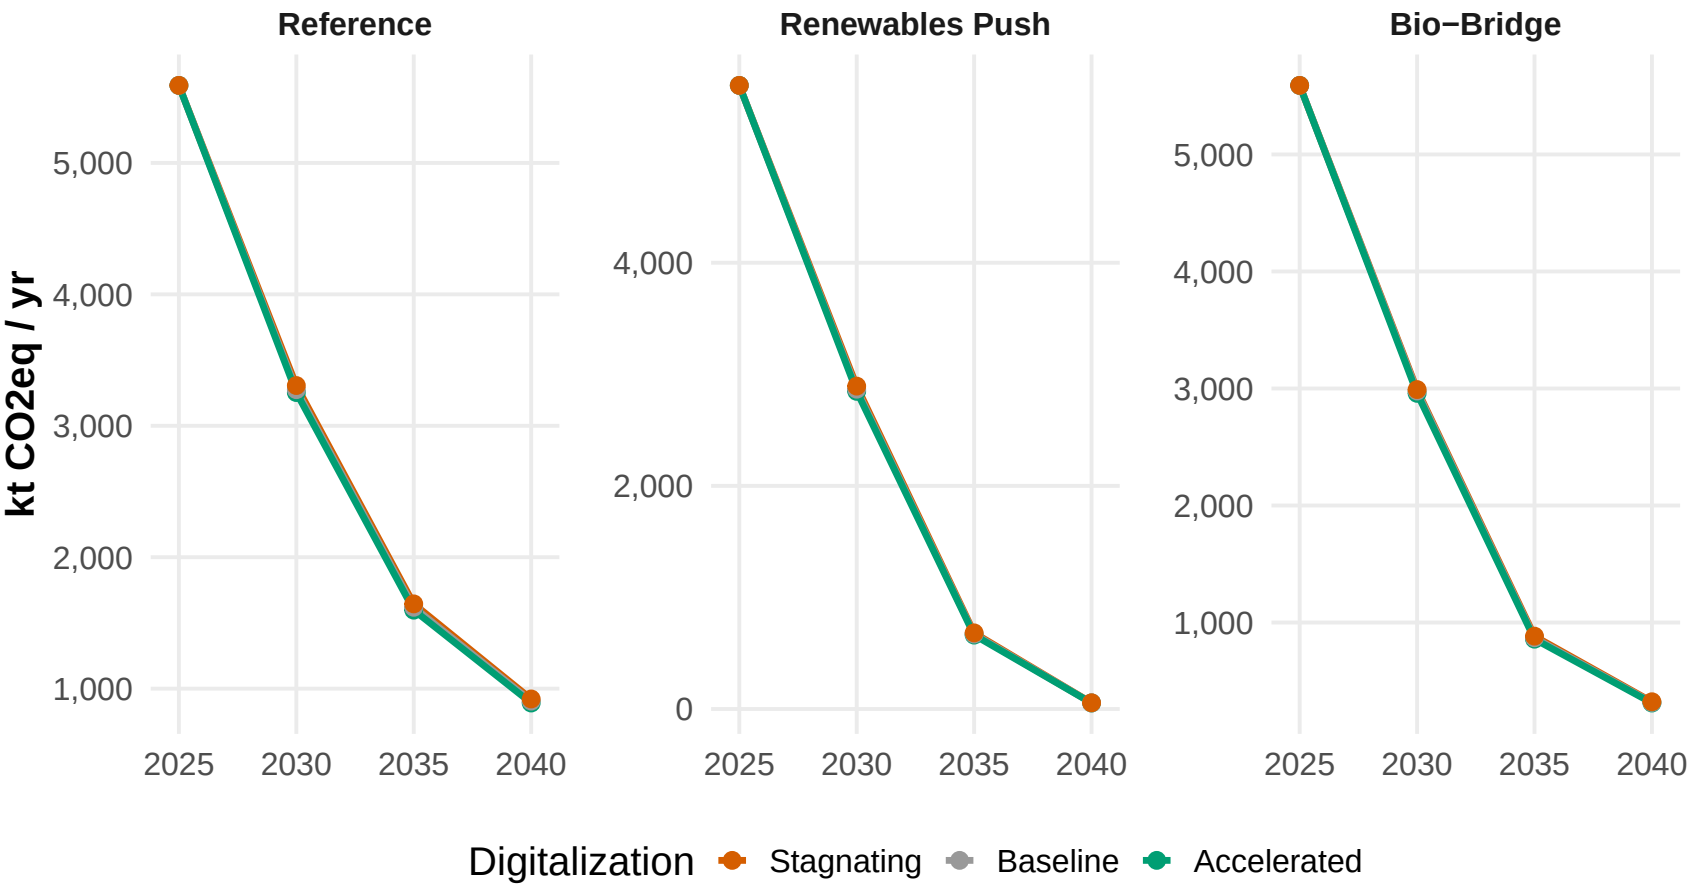

Heating-system transition (useful-energy output, GWa)

Rows: pathway, columns: adoption level

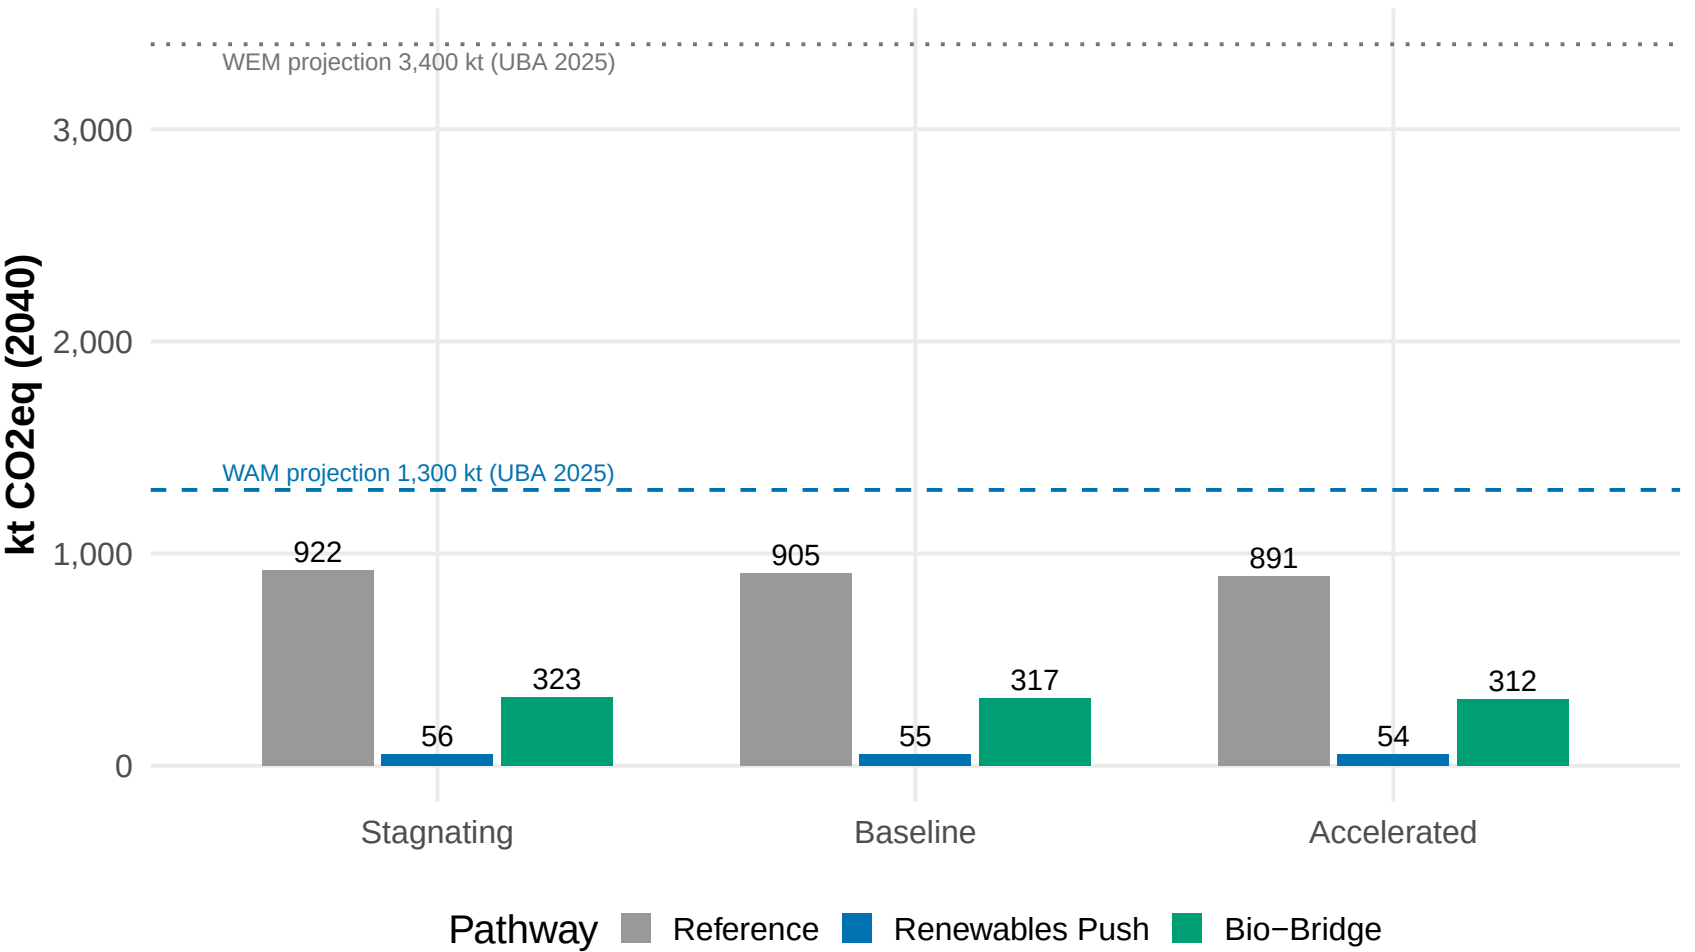

Digitalization effect on territorial buildings CO2eq (RQ2)

2040 spread 54–922 kt across adoption levels

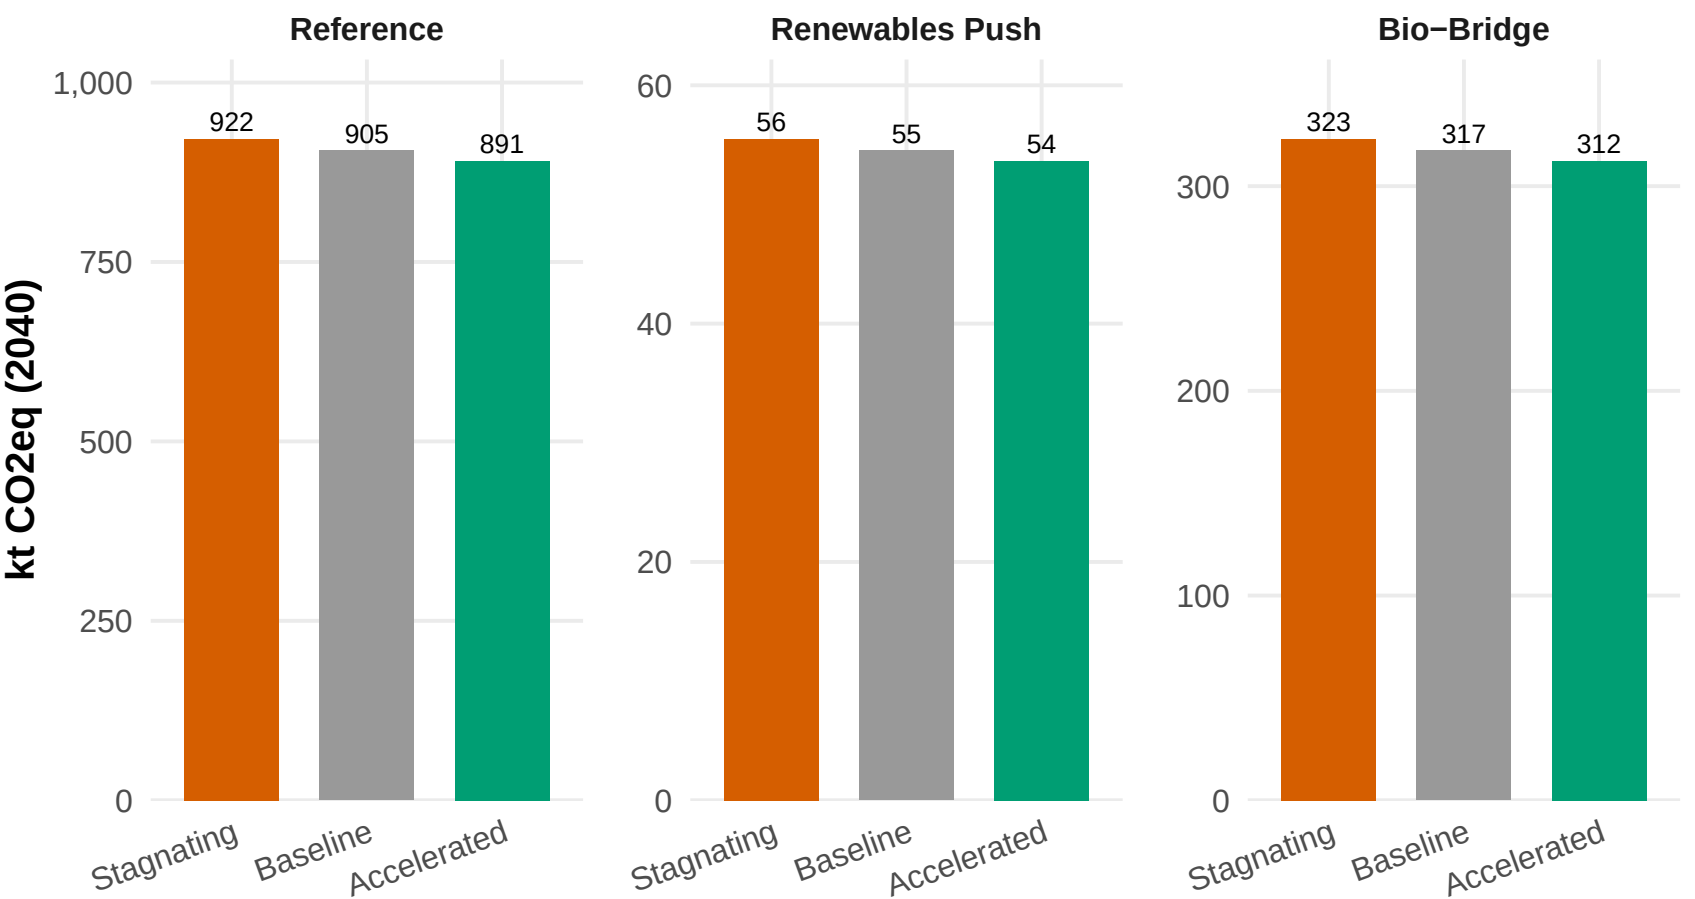

2040 buildings CO2eq against the official projections (RQ1)

2040 territorial buildings CO2eq by adoption level (RQ2)

Spread across adoption levels: Reference ~31 kt · Renewables Push ~2 kt · Bio-Bridge ~11 kt

Territorial buildings CO2eq by source

Baseline adoption; district heat and electricity carry no direct emissions (CRF 1.A.1)
